Leverages Award Winning  
Network, Low Fixed Costs,  
Scalable Architecture

Focus on private label wholesale  
Voice over Internet Services

Enables broadband service  
providers to quickly deploy voice  
services to their users.

VoIP over Mobile Networks

### Why Invest in Pervasip Corp ?

Pervasip Corp. is a low-cost and highly scalable Linux server cluster technology used for hosted IP telephony solutions. Pervasip is the wholesale VoIP partner and proud to be associated with Zer01 Mobile. Zer01 is a new mobile carrier currently being picked up by many industry magazines and analysts due to its ground-breaking mobile VoIP technology solution over the GSM networks. Zer01 has announced at CTIA 2009 that they will commence an unlimited voice and data mobile product offering on July 1st 2009.

Through its wholly-owned subsidiary VoX Communications, Pervasip delivers wholesale Voice over IP (VoIP) services to cable operators, ISPs, wireless companies, CLECs and other resellers who require high quality private-labeled broadband phone offerings for their customers.

VoX's proprietary IP platform enables superior quality and service at very low fixed costs, which is expected to translate into a faster break even threshold as the Company capitalizes on accelerating market demand for its VoIP services.

### Wholesale Voice Over IP

- VoX's network equipment cost per subscriber is less than \$10
- VoX has the ability to scale its softswitch architecture in relatively small capital increments. \$100,000 in additional equipment is a standard purchase to add additional capacity of 10,000 lines.
- VoX pays no software license fees, as it owns its technology.
- The rental costs of a co-location facility and the IP circuits in and out of the facility are inexpensive
