About W2 Energy Inc.

W2 Energy designs mass-to-energy plants which convert feedstocks into syngas, using patented low temperature highly efficient non-thermal plasma-based reactor technology. This allows the plant to run at a low cost and a profit.

W2 energy has proprietary and patented technologies which can take coal, garbage, natural gas, plastics, sewage and/or agricultural waste and convert them into usable liquid fuel, while sequestering the greenhouse gases.

Their technologies represent significant advances in plasma gasification, electrical production, carbon sequestration and gas-to-liquid technologies.

Their plants are scalable and can be built to handle feedstocks in amounts as little as 1 ton per day and as large as 15,000 tons per day.

Their technologies have been designed and tested in small scale and are ready to be deployed in full commercial scale.
